

You purchased your container bag, and now what? Here are the instructions that will guide you how to make use of your new purchase, and dispose of your waste in the most convenient way.

How to place the Container Bag?

Choose the right spot for your container bag. Once it is filled, it will be too heavy to move manually. But, what is the right spot?

Keep in mind, the container bags need to be accessible for the lorry with a loading/gantry crane to pick it up when you are done!

Place the container bag within 2 meters of the public road with the short side facing the road.

Place it away from any obstacle (cars, fences, trees, lampposts etc).

Do not place it in a garage or under a carport/roof.

The Nijhoffer should be closable without protruding parts by means of the attached lid.

Put all your wastes in the bag, anything outside the bag will not be picked up.

Figure 1: Nijhoffer placement

B=Crane

Now that you are all set, it is time to fill your container bag. Follow our guidelines to fill in your bag the right way!

How to fill the container bag?

Remove the bag from the packaging and fold it open

Fold the sides outwards by the loops. The bag will now remain self-standing open at half height

It should look like this 

Figure 2: Folded sides on the container bag

Start filling the Nijhoffer container bag. Do not stack the waste, but dump it loose in the Nijhoffer to distribute the weight

Use a wheelbarrow and fill your bag on the short side of the bag flat. It will be easier at the beginning!

When the bag is half full, you can straighten again, like this 

Figure 3: Fold the sides back and fill it up

When you are done filling your bags, close the bag by fastening the attached lid with the loops.
